

ENERGY STAR Computers

Version 6.0

Draft 2 Meeting

May 23, 2012

Action Items

Learn more at energystar.gov

EPA and DOE

- Correct TEC scaling factor in DT/NB display adder formula
- Provide alternative candidate display adder formulas
- Investigate TEC allowance proposal for power supplies submitted by NRDC
- Distribute message describing outcome of discussions on ITI categorization and integrated displays
- Consider slate computing device feedback raised in the meeting (requirements, labeling)
- Consider CB scope of accreditation options for slates
- [As already planned] Upon completion of TEC weightings for Desktops and Notebooks, rework notebook Full Network Connectivity weightings referencing recommendations already forwarded by industry stakeholders
- Review test method comments (e.g., dark room, etc.)
- Consider comments on Third Party Certification (3PC) received during the meeting

Stakeholders

- Provide recommendations for revisions to the Slate Computing Device definition
- Provide further feedback on EPA's assumptions underpinning development of the discrete graphics adders
- NRDC to provide savings potential of power supply incentive proposal
- Investigate and provide feedback on a) considerations/concerns on the SPEC Workstation product, and b) alternative workloads or approaches for supplying active mode data
- Provide data on Thin Client off mode power
- Provide use case information for local discrete GPU capability in thin clients

EPA and Stakeholders

- Organize calls on the following topics:
 - Further review of ITI category proposal
 - DT/NB display adder: alternative formulas, enhanced displays
